SHIBAN HAFIZ

B.E. CSE (Artificial Intelligence and Machine Learning) | Software & Applied AI
+919741670244 | Shibanhafiz07@gmail.com | LinkedIn | GitHub | Bhatkal, Karnataka, India

PROFILE

Second-year B.E. Artificial Intelligence and Machine Learning student interested in building practical software products using Python, web technologies, APIs, and AI services. Built and iterated on academic and personal projects with AI-assisted development, while actively strengthening programming, backend, data structures, and machine-learning fundamentals. Seeking a software, full-stack, or applied-AI internship.

EDUCATION

B.E. in CSE (Artificial Intelligence and Machine Learning) | Anjuman Institute of Technology & Management (AITM), Bhatkal
Expected Graduation: 2029

TECHNICAL SKILLS

Programming: Python, C, Java
Web Development: HTML, CSS, React, Vite
Backend & APIs: FastAPI, Express.js, REST API fundamentals
AI / ML: AI API integration, ML fundamentals
Database: SQL fundamentals
Tools: Git, GitHub, VS Code, Docker fundamentals

PROJECTS

Harvex – AI-Assisted Smart Farming Platform | *React, Express/Vite, FastAPI, Python, AI services*

- Public fork of Team Goldsmiths / SIH26180; I authored merged upstream PR #1, touching backend, frontend, server, firmware, and documentation.
- Reviewed source for field telemetry, irrigation decisions, leaf analysis, weather, crop recommendations, agronomy chat, and voice routes; end-to-end and hardware behavior were not independently verified.
- A rover for targeted farm operations is future work, not an implemented feature.

AgentBreak – Web Security Testing Prototype | *React, TypeScript, APIs*

- Built a prototype workflow where a user submits a website URL and receives automated security-testing findings and supporting information.
- Improved the reporting workflow to make automated findings easier to understand and distinguish from evidence that requires validation.
- Used the project to learn fundamentals of web application security, APIs, authorization boundaries, and AI-assisted security testing.

Smart Classroom Management System | *Python, Tkinter, Matplotlib*

- Developed a desktop prototype with student/faculty login, announcements, assignments, attendance, grading, doubt management, password changes, and file uploads.
- Implemented role-based workflows and attendance visualization to practice application development and data handling.

DEVELOPMENT & LEARNING

- Hands-on Git/GitHub workflow including repositories, branches, commits, pushes, forks, pull requests, and collaboration.
- Uses AI coding tools for prototyping, debugging, learning, and iteration, while working to understand and implement the underlying concepts independently.
- Currently strengthening Data Structures & Algorithms, SQL, backend development, machine learning, Docker, and secure software development.

RELEVANT COURSEWORK

Programming in C • Python • Data Structures & Algorithms • Database Fundamentals • Web Development • Artificial Intelligence & Machine Learning

INTERESTS

Full-Stack Development • Applied AI • AI/ML Engineering • Backend Development • Cybersecurity Fundamentals
